EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Although independent claims 14, 27, and 31 appear somewhat broad, none of the prior art of record discloses or reasonably suggests transmitting information regarding first and second filters, and transmitting data to indicate switching between the first filter and the second filter, wherein a perception of an audio signal is improved.

It is known in speech encoding and decoding to transmit linear predictive coefficients from a speech encoder so as to produce a synthesis filter from the transmitted linear predictive coefficients at a speech decoder for each frame of speech, but the prior art of record does not disclose or reasonably suggest transmitting data to switch between the filters. The synthesis filter at the decoder is simply continuously updated by new linear predictive coefficients as they are received.

Moreover, it is known in the prior art to switch between Huffman decoders for frames of data by transmitting a flag from an encoder to indicate what table should be used to decompress transmitted data. However, a Huffman table is not a filter, *per se*, and the Huffman tables are not typically transmitted, but are generally pre-existing at the encoder and the decoder for a given design of the codec.

Similarly, MPEG encodes and decodes long blocks and short blocks with different filters, but the codec scheme is generally pre-existing in the design of the codec, so that the filters are not transmitted. Scale factors are transmitted for MDCT, but filters are not generally transmitted. See, *e.g.*, *Sinha et al.*

Applicants' Specification, Page 2, Lines 5 to 21, states an advantage of more effective deployment of TNS filters for sources having different temporal structures. The prior art of record does not disclose or reasonably suggest transmitting information regarding first and second filters, and transmitting data to indicate switching between the first and second filters, to improve a perception of an audio signal for effective deployment of TNS filters for sources having different temporal structures.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
